

INTRODUCTION

For turfgrass, all 16 nutrients are essential, but nitrogen and iron are considered most important. Nitrogen is a component of nucleic acids, amino acids, proteins, chlorophyll, and coenzymes, while Iron is an essential micronutrient for crop growth because of its role in chlorophyll production. Because of this, iron plays an important role in photosynthesis and enzyme composition.

FerroTurf is a natural and organic liquid fertilizer for all types of turf including residential lawns, playing fields, commercial turf production, and golf courses. Rich in nitrogen and iron for lush growth and greening, this formula's dual action feeds through both foliage and root system for a quick green-up.

NUTRIENTS	Value	SIZES	SKU
Total Nitrogen (N)	3.00 %	20 L	BF1891866
Iron (Fe)	3.00 %		

PRODUCT CHARACTERISTICS		
Appearance	pH	Specific Gravity
brown liquid	3.2	1.19 g/mL

DIRECTIONS FOR USE

Stir or shake well before use.

CAUTION:

Product may cause staining on concrete, masonry, walls, fences, and other non-plant surfaces.

APPLICATION RATES

Apply 200 - 300 ml per 1000 m². Use 2-3 times a season. When used along with organic granular fertilizer, use lower rates as needed to maintain health and colour of lawn. For best results, apply it early morning or late in the evening. DO NOT apply during hot and daytime conditions or when grass is under water

BENEFITS

- Source of amino-chelated iron
- Helps turf recover from environmental stresses and injury caused during the cooler season
