

Stage 2 *plus*⁺ Xcelerator 20.5-5-0 60% SN

GUARANTEED MINIMUM ANALYSIS

Total Nitrogen (N):.....20.50 %
 Ammoniacal: 1.5 %
 Urea: 19 %
 Available Phosphoric Acid (P₂O₅):..... 5.00 %

SIZES

20 L: BF1804214
 1000 L: BF1804212

After several years of development, TerraLink launched a three-stage series of liquid fertilizers for fertigation in young blueberries. The three products are meant to be used in succession, one following the other to supply the essential nutrients in the correct ratios and in the correct order. Although any fertigation program should be complemented with granular fertilizers and other fertigation products to keep cost to a minimum, the use of EarthLink's Stage I, Stage II and Stage III products will supply many important nutrients just when plants need them.

EarthLink Stage II Xcelerator is a high nitrogen and phosphorus liquid feed. Use it as a drench or foliar application as part of a complete fertility program. It contains 60% stabilized nitrogen along with organic components for soil fertility and health. This product provides nutrients as follows (see table):

Gal.	kg N	kg P
1	0.92	0.22
2	1.84	0.45
3	2.76	0.67
4	3.68	0.90
5	4.60	1.12
