FEATURES

- 50% of total N from stabilized nitrogen

BENEFITS:

Designed for use in raspberries or blueberries where soils test high in P and K.

DIRECTIONS:

The rates given reflect a mineral soil in the range of 3 - 10% organic matter. On soils with organic matter above 10% use a lower nitrogen blend suited for blueberries such as Hi-Ca Peat Soil 6-20-14.

APPLICATION RATES:

Blueberries: 1 - 3 Years: Use 15-8-11 (Premium Berry Blend). *3+ Years:* Use 20-10-6+micros at 2 oz per plant per year of age to a maximum of 16 oz per plant. This application should be split; half in April and the remaining half in mid-May. On a standard 4 x 10 ft spacing, this amounts to 75 lbs/acre per year(s) of planting applied twice. Example: 3 year plants, 3 x 75 = 225 lbs/acre applied twice. Place fertilizer at the drip line of the plant (approximately outside edge of foliage).

Raspberries: New Plantings: 300 lbs/acre followed by 300 lbs/acre of 12-12-18, 3 - 4 weeks later. *Meeker, Willamette:* 2 applications of 300 lbs/acre. *Other raspberry varieties:* 2 applications of 150 lbs/acre.

Blackberries, all varieties: 2 applications of 300 lbs/acre.

Currants, Gooseberries, all varieties: 1 - 2 applications of 200 lbs/acre

It is strongly recommended that the producer conduct tissue and soil tests. Fertilizer applications should be adjusted accordingly to avoid excessive build-up or deficiencies of one or more nutrients.

CAUTION:

Avoid contact with eyes and prolonged contact with skin. If eyes or skin are exposed, flush with water. Do not use on container stock or in greenhouse production. This is not a label; these guidelines are based on the experiences of producers in the Fraser Valley. Always refer to soil test results before use.
