Benefits:

A balanced 1:1 N & K fertilizer with controlled release nitrogen designed for use on golf course fairways and sports fields. Contains 60% controlled release nitrogen from Methylene 75 (methylene urea). Methylene 75 gradually releases nitrogen to turfgrass up to 14-16 weeks. Use of controlled release nitrogen results in minimal surge growth and prolong colour response. Balanced potassium level assists turf in summer heat tolerance, winter cold tolerance plus disease resistance. Contains a full complement of micronutrients responsible for photosynthesis, protein synthesis and overall plant growth. A full analysis fertilizer that can be used from late spring through to fall.
