25 kg

FEATURES

- Specifically designed for use when planting corn
- Also suitable for other crops
- With micros

BENEFITS:

This blend has been specifically designed to be applied to fields when planting corn. This blend has a medium level of phosphorus for soils testing low to medium in P.

DIRECTIONS:

This fertilizer contains manganese, boron and zinc and should only be used as recommended. It may prove harmful if misused. Excessive boron can cause serious damage to some crops. Beans and cucumbers are especially sensitive to boron, even in the year following boron application. Do not apply this product to sensitive crops and do not plant sensitive crops the following year in the same area without first sampling for boron carryover.

APPLICATION RATES:

Field Corn, Silage Corn or Sweet Corn:

Apply 150-500 lbs per acre of 14-28-6 at planting banded 2 inches below and 2 inches to the side of seed placement.

Other Crops:

14-28-6+micros can be applied with other crops at planting time. Before using, make sure to consult with an agronomist in the industry for appropriate rates of application. Also, some crops are sensitive to boron, such as beans and cucumbers. If boron must be avoided, substitute with another high phosphorus blend, such as 10-30-10.

It is strongly recommended that the producer conduct tissue and soil tests. Fertilizer applications should be adjusted accordingly to avoid excessive build-up or deficiencies of one or more nutrients.

CAUTION:

Avoid contact with eyes and prolonged contact with skin. If eyes or skin are exposed, flush with water. Do not use on container stock or in greenhouse production. This is not a label; these guidelines are based on the experiences of producers in the Fraser Valley. Always refer to soil test results before use.
