

Mineral Soil Blues

18-9-9 +

GUARANTEED MINIMUM ANALYSIS

Total Nitrogen (N).....	18.00 %
Available Phosphoric Acid (P ₂ O ₅).....	9.00 %
Soluble Potash (K ₂ O).....	9.00 %
Sulphur (S).....	12.00 %
Magnesium (Mg)	4.00 %
Boron (B).....	0.20 %
Zinc (Zn).....	0.20 %

FEATURES

- Standard blend for blueberries on mineral soil.
- With micros
- Does not contain any chlorides

BENEFITS:

This is a standard blend for blueberries on mineral soils. It contains magnesium, boron and zinc but does not contain any chlorides.

DIRECTIONS:

The rates given reflect a mineral soil in the range of 3-10% organic matter. On soils with organic matter above 10% use a lower nitrogen blend suited for blueberries.

APPLICATION RATES:

- 1 - 3 years: Use 15-8-11 (Premium Berry Blend)
- 3+ years: 2 oz per plant per year of age to a maximum of 16 oz per plant.
- This application should be split; half in April and the remaining half in mid-May.
- On a standard 4 ft x 10 ft spacing, this amounts to 75 lbs/acre per year(s) of planting, applied twice. Example: 3 year plants, 3 x 75 = 225 lbs/acre applied twice. Place fertilizer at the drop line of the plant (approximate outside edge of foliage).

It is strongly recommended that the producer conduct tissue and soil tests. Fertilizer applications should be adjusted accordingly to avoid excessive build-up or deficiencies of one or more nutrients.

CAUTION:

Avoid contact with eyes and prolonged contact with skin. If eyes or skin are exposed, flush with water. Do not use on container stock or in greenhouse production. This is not a label; these guidelines are based on the experiences of producers in the Fraser Valley. Always refer to soil test results before use.
