

Okanagan CherryGrow

Product Highlights:

- Slow release nitrogen from Stabilized Slow Release Urea
- Contains Boron
- Low in Chlorides

Guaranteed Minimum Analysis:

Total Nitrogen (N):.....	22.0 %
Available Phosphoric Acid (P ₂ O ₅):.....	5.0 %
Soluble Potash (K ₂ O):.....	12.0 %
Sulphur (S):.....	6.0 %
Magnesium (Mg):	3.0 %
Boron (B):.....	0.3 %

Nutrient Sources:

Nitrogen:	Urea	45 %
	Ammonical	5 %
	Stabilized Release Nitrogen	50 %
Phosphorus:	Mono Ammonium Phosphate	100 %
Potassium:	Muriate of Potash	49 %
	Sulphate of Potash Forms	51 %
Sulphur:	Sulphate Forms	100 %
Magnesium:	Sulphate of Potash of Magnesia	100 %
Boron:	Granulated Borate	100 %

Benefits:

CherryGrow is a higher end fertilizer product developed for cherry crops on sandy soils where nutrient retention over time is limited. Stabilized Release Nitrogen is used in this blend to minimize volatilization and nutrient leaching while ensuring a constant supply of nitrogen for plant growth. The Phosphorus will help ensure strong root development and is a key component for photosynthesis. Over fifty percent of the potash is provided in the sulphate form to minimize chlorides and keep the salt index down. The addition of Boron in this blend makes this a good choice on alkaline soils where Boron availability is often limited. The Magnesium will help maximize chlorophyll development.
