

Phosphate Treatment

10-34-10

GUARANTEED MINIMUM ANALYSIS

Total Nitrogen (N)	10.00 %
Available Phosphoric Acid (P ₂ O ₅).....	34.00 %
Soluble Potash (K ₂ O).....	10.00 %
Sulphur (S).....	3.00 %

FEATURES

A high phosphorus and quick release nitrogen blend in a 1:3:1 ratio best suited to field grown seedbeds. Encourages good root growth without excessive top growth.

Not for use on blueberries or cranberries!

DIRECTIONS:

For cole crops it is common practice to apply liming materials and fertilizer at the same time. It is however best to apply them separately. Ideally lime should be applied a few weeks ahead. This reduces the possibility of reaction between the fertilizer and the lime. It is strongly recommended that the producer conduct soil tests prior to application. Fertilizer applications should be adjusted accordingly to avoid excessive build-up or deficiencies of one or more nutrients.

APPLICATION RATES:

Seedbeds:

500 lbs per acre pre-plant incorporated.

CAUTION:

Avoid contact with eyes and prolonged contact with skin. If eyes or skin are exposed, flush with water. Do not use on container stock or in greenhouse production. This is not a label; these guidelines are based on the experiences of producers in the Fraser Valley. Always refer to soil test results before use.
