

Southern Interior Irrigated Forage Mix

- Interior
 - Prefers irrigated conditions
 - Good general purpose irrigated blend
- For:*
- Hay
 - Silage
 - Grazing

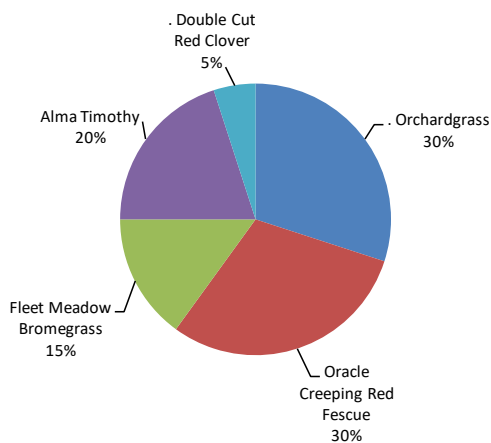

Southern Interior Irrigated is designed for irrigated pasture, silage, or hay regions of the warmer southern BC Interior. Although designed for irrigated regions, this blend requires well-drained soils. The combination of timothy, orchardgrass and smooth brome grass makes this a high yielding forage blend. The addition of creeping red fescue and red clover helps make this blend adaptable to grazing as well as silage and hay production.

This mixture comes in 20 kilogram bags and should be seeded at 25-30 pounds per acre, depending on seeding conditions and desired growth density.

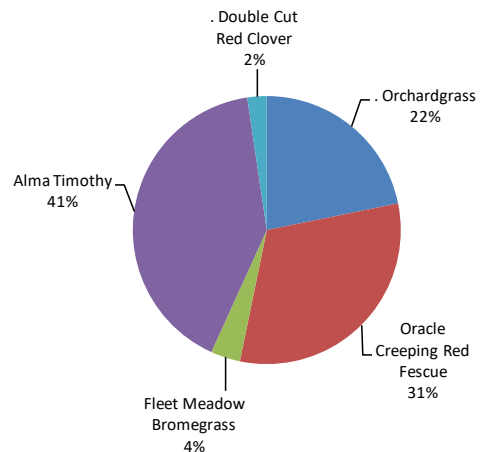

*Richardson Seed forage mixtures *do not* contain endophyte-enhanced grasses.
